

Networking Refresher

Here are a few important commands and information that will be helpful in this guide:

To find out the IP address and interface information of a Linux machine, use the `ifconfig` command as shown below:

```
root@kali:~# ifconfig
eth0: flags=4163<UP,BROADCAST,RUNNING,MULTICAST> mtu 1500
    inet 192.168.57.139 netmask 255.255.255.0 broadcast 192.168.57.255
    inet6 fe80::20c:29ff:fe0a:4205 prefixlen 64 scopeid 0x20<link>
    ether 00:0c:29:0a:42:05 txqueuelen 1000 (Ethernet)
    RX packets 532864 bytes 281989720 (268.9 MiB)
    RX errors 0 dropped 0 overruns 0 frame 0
    TX packets 25605 bytes 2515702 (2.3 MiB)
    TX errors 0 dropped 0 overruns 0 carrier 0 collisions 0
```

`inet` -> IPv4 address

`inet6` -> IPv6 address

`netmask` -> subnet mask

`ether` -> MAC address (can be verified using MAC address lookup on the internet)

TCP is a connection-oriented protocol

UDP is a connectionless protocol

Three-Way Handshake

- i. SYN
- ii. SYN ACK
- iii. ACK

Tip: To open "Wireshark" with shell access, use "`wireshark&`".

Common Ports and Protocols

TCP

1. FTP - 21
2. SSH - 22
3. Telnet - 23
4. SMTP - 25
5. DNS - 53
6. HTTP - 80
7. HTTPS - 443
8. POP3 - 110

9. SMB - 139 + 445

10. IMAP - 143

UDP

1. DNS - 53

2. DHCP - 67, 68

3. TFTP - 69

4. SNMP - 161

The OSI Model

1. Physical - data cables

2. Data Link - Switching, MAC addresses

3. Network - IP addresses, Routing

4. Transport - TCP/UDP

5. Session - session management

6. Presentation - WMV, JPEG, MOV

7. Application - HTTP, SMTP

NOTE: When troubleshooting a network, start from the Physical Layer down to the Application Layer.

Subnetting

The Cyber Mentor's Subnetting Sheet								
	Subnet x.0.0.0							
CIDR	/1	/2	/3	/4	/5	/6	/7	/8
Hosts	2,147,483,648	1,073,741,824	536,870,912	268,435,456	134,217,728	67,108,864	33,554,432	16,777,216
Class A	Subnet 255.x.0.0							
CIDR	/9	/10	/11	/12	/13	/14	/15	/16
Hosts	8,388,608	4,194,304	2,097,152	1,048,576	524,288	262,144	131,072	65,536
Class B	Subnet 255.255.x.0							
CIDR	/17	/18	/19	/20	/21	/22	/23	/24
Hosts	32,768	16,384	8,192	4,096	2,048	1,024	512	256
Class C	Subnet 255.255.255.x							
CIDR	/25	/26	/27	/28	/29	/30	/31	/32
Hosts	128	64	32	16	8	4	2	1
Subnet Mask (Replace x)	128	192	224	240	248	252	254	255
Notes:	*Hosts double each increment of a CIDR *Always subtract 2 from host total: Network ID - First Address Broadcast - Last Address							

Use ipaddressguide.com/cidr as a guide when calculating subnets.

Subnet Calculation Example

```
1. 192.168.0.0/22 -> Subnet: 255.255.252.0 -> Hosts: 1022 -> Network ID: 192.168.0.0 -  
> Broadcast IP: 192.168.3.255  
2. 192.168.1.0/26 -> Subnet: 255.255.255.192 -> Hosts: 62 -> Network ID: 192.168.1.0 -  
> Broadcast IP: 192.168.1.63  
3. 192.168.1.0/27 -> Subnet: 255.255.255.224 -> Hosts: 30 -> Network ID: 192.168.1.0 -  
> Broadcast IP: 192.168.1.31
```
